

RESERVOIR GRADE™ LAND DATA ACQUISITION

GLOBAL GEOPHYSICAL SERVICES

WORLDWIDE LAND ACQUISITION CAPABILITIES

Acquisition: Global Geophysical Services is an expert provider of High Density Reservoir Grade 3D™ (RG3D) and Ultra RG3D seismic solutions. With the seismic industry's largest complement of state-of-the-art nodal recording systems, we record data sets with extra long offsets, rich azimuth distribution, improved spatial resolution, and increased signal-to-noise ratio, all with a focus on zero preventable HSEQ incidents, at world-record production, and in some of the world's most diverse terrain.

Record-Breaking Channel Count: Global Geophysical Services is at the forefront of acquisition technology, spearheaded by our revolutionary AutoSeis® High Definition Recorder (HDR) autonomous nodal acquisition system. This 32-bit recording technology is incredibly robust and productive, and its unlimited scalability enabled our breakthrough Ultra RG3D project in the Permian Basin with a trace density in excess of 4 million traces per square mile.

State-of-the-Art Fleet: As worldwide experts on vibroseis seismic operations, Global has a fleet of 97 field-proven ION AHV-IV 62,000 and 80,000 pound vibrators, equipped with Sercel VE432 and VE464 electronics. We have also built one of the industry's largest inventories of modern seismic recording equipment, having deployed more than 125,000 channels across 11 crews worldwide.

Leading Edge Vibroseis Capabilities: Global Geophysical Services utilizes the most advanced vibroseis technology, including HFVS, slip-sweep and Offset Separated Simultaneous Sweep (OSS) and Independent Simultaneous Source (ISS) seismic recording.

Total Operation Solutions: Global Geophysical Services provides total operation solutions, including: in-house permitting, real-time kinematic, inertial and conventional surveying, equipment leasing, and equipment repair services.
